

Scalability & Future Plan

Date	04 July 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S. No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Uses a limited dataset for training	Map reduce prediction accuracy for unseen data.	High
2	Supports only single-user access at a time.	Not suitable for multiple concurrent users	Medium
3	Limited security and cloud deployment	Restricts accessibility and data protection	Medium

Scalability Plan:

S. No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports a limited number of users	Deploy on cloud (AWS/Azure/Render) with load balancing for multiple users.
2	Data Storage	Uses local CSV	Store data in a scalable cloud database such as MySQL or MongoDB
3	Performance	Prediction on a local machine	Optimize the ML model and deploy using cloud infrastructure for faster response
4	Security	Basic application security	Implement user authentication, HTTPS, and secure cloud storage.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Improve the machine learning model using larger and more diverse datasets.	1-2 months	Increases prediction accuracy and reliability
Phase 2	Deploy the application on a cloud platform (AWS/ azure/Render) with a database backend.	2-4 months	Enables multi-user access, better scalability, and availability
Phase 3	Integrate AI-based recommendations, real-time data updates, and interactive dashboards.	4-6 months	Provides personalized insights and enhances the overall user experience.
